

Christ Church Freemantle

Sunday 28th June; Third Sunday after Trinity

If asked if I am a Christian, I have to reply, in all honesty, “no”, but I immediately qualify this by saying that I am always trying to be one. I have a pathway and a direction of travel but have not yet reached my destination.

As a young man, an issue that I struggled to understand was how God could be everywhere for always. My belief is that God is revealed in the universe as a creator, sustainer and transformer of all that there is.

With this picture in mind, I go back to Einstein and his famous equation $E = mc^2$. As far as we can tell, the universe evolved out of a burst of energy – the “E” in the equation. For technical reasons “E” in all its forms, must be present in all places and at all times. Furthermore, energy can never be destroyed but only transformed.

I do not know how theologically sound my picture of “E” reflecting aspects of the Creator is, but it helps me with my restless and questioning mind.
